# ShurjoPay WISECP Payment Gateway Installation Guide

Requirement:

- WISECP v2.3.2, v3
- PHP 7.x
- ShurjoPay Marchant Account. If you have no ShurjoPay Marchant account, you can apply at https://shurjopay.com.bd/.

Installation Steps:

- **Step-1:** Unzip then upload '**ShurjoPay**' directory in your WISECP installation under /coremio/modules/Payment/

- **Step-2:** Now go into **Billing>Payment Gateways** in your WISECP admin panel, then click on "**All Modules**" tab then find '**ShurjoPay**', click on that then enter your API Username, Password and Transaction Prefix, then click on 'Save Settings' then add '**ShurjoPay**' from **Initial Settings>Enabled Module Selection** then click on 'Save Settings' again. Please note that by default sandbox credentials will be loaded, so you can test 'demo payment'

and 'callback' before entering your live credentials. You can use below demo card and wallet for test payment.

DEMO CARD
========================
Card Number: 4321 1111 1111 1111
Month: 01
Year: 2030
CVV: 123
Card owner name: shourjoPay

Demo Wallet
==================
Mobile: 01717111111
PIN: 123

Known Issues:

If you see "***Something went wrong, please contact Administrator***" when paying invoice, please make sure your test or live clients has their 'Billing Profile' properly filled with their Name, Address and Phone number. It is recommended that you 'Login as your client' from admin panel then edit their billing profile and recheck invoice payment.

Disclaimer

This payment gateway module is contributed by **Echost** and is licensed for free use for all. It is recommended that always backup your database before installing any new modules to avoid any unexpected situation. Although all code has been verified by WISECP authority and approved for distribution but for various environment like hosting, server and php configuration any unexpected error or situation could come, so always keep backup before doing anything new.
